

**Alpha MOS announces that its MedTech subsidiary BOYDSense has been selected by the European Innovation Council (EIC) Accelerator of the Horizon Europe funding program. This award recognizes the excellence of its work in medical innovation dedicated to the monitoring of chronic diseases. This €2.5M grant will accelerate the development of a miniaturized breath analyzer for blood glucose monitoring of pre-diabetics and type 2 diabetics.**

The EIC Accelerator is the cornerstone of the Horizon Europe funding program (2021-2027) managed by the European Commission (EC) and the European Innovation Council (EIC). It is a highly selective program for small and medium-sized enterprises (SMEs) that need financial support to develop and industrialize an innovation.

Joining the EIC Accelerator of the Horizon Europe program is a decisive step for BOYDSense. Several thousand companies apply to this program each year and only a few dozen are selected. This program rewards the most innovative projects that strengthen European technological sovereignty.

Bruno Thuillier, founder and CTO of BOYDSense, comments on this decision: "It is a significant achievement to have been selected among several thousand companies. This signal demonstrates the EIC's commitment to establish a European champion in non-invasive chronic disease management, starting with diabetes."

Pierre Sbabo, CEO of Alpha MOS, congratulates his teams: "I am pleased with this selection which demonstrates the quality of the innovation of the Alpha MOS group, as the competition was intense. This funding will allow us to accelerate the development of our non-invasive blood glucose measurement technology. This is a key step towards the future release of a commercial product for diabetics."

#### **Alpha MOS**

Alpha MOS (Euronext Paris, ISIN : FR0013421286 ALM), an expert in sensory analysis, the company is a global leader in the creation of electronic noses, tongues and eyes for industrial use. Founded in 1993, Alpha MOS is an international corporation with subsidiaries in France, China and the USA.

#### **BOYDSense**

BOYDSense SAS, a subsidiary of Alpha MOS, is a pioneer in the development of non-invasive breath analysis solutions for monitoring vital parameters. The first application under development is a miniaturized breath analyzer for monitoring glucose concentration in pre-diabetic and type 2 diabetic individuals.
